Term-Test #1
Thursday, November 11, 2010
Time allowed: 90 minutes

Please PRINT in INK or BALL-POINT PEN:
(Please PRINT full name and UNDERLINE surname):

NAME OF STUDENT: _____

STUDENT NO.: _____

SIGNATURE OF STUDENT
(in INK or BALL-POINT PEN): _____

TUTORIAL CODE (e.g., M4A, R5D, etc.): _____

TUTORIAL TIME (e.g., T4, R5, F3, etc.): _____

NAME OF YOUR TA: _____

NOTE:

1. Before you start, check that this test has 12 pages. There are NO blank pages.
2. This test has two parts:
   PART A [50 marks]: 10 multiple choice questions
   PART B [50 marks]: 7 written questions
   Answers to both PART A and PART B are to be given in this booklet. No computer cards will be used.
3. No aids allowed.
   No calculators!

DO NOT TEAR OUT ANY PAGES.

FOR MARKERS ONLY	
QUESTION	MARK
PART A	/50
B1	/7
B2	/8
B3	/8
B4	/5
B5	/7
B6	/7
B7	/8
TOTAL	/100

PART A *[50 marks]*

Please read carefully:
PART A consists of 10 multiple-choice questions, each of which has exactly one correct answer. Indicate your answer to each question by **completely filling in the appropriate circle with a dark pencil.**
MARKING SCHEME: 5 marks for a correct answer, 0 for no answer or a wrong answer. You are not required to justify your answers in PART A. Note that for PART A, **only your final answers (as indicated by the circles you darken) count; your computations and answers indicated elsewhere will NOT count.**

DO NOT TEAR OUT ANY PAGES.

1. Find the value of $\lim_{x\to 4} \dfrac{x^2-3x-4}{x^2-2x-8}$.

   (A) $\frac{1}{2}$

   (●) $\frac{5}{6}$

   (C) $\frac{3}{4}$

   (D) $-\frac{4}{3}$

   (E) undefined

2. Find the value of $\lim_{x\to\infty} \dfrac{x^4-x^2+3}{5+x^3-2x^4}$.

   (A) $\frac{1}{5}$

   (B) $\frac{3}{5}$

   (●) $-\frac{1}{2}$

   (D) $-\frac{3}{2}$

   (E) undefined

3. Find the value of $\lim_{x\to 0} \dfrac{(\sin 3x)(\cos 2x)(\csc 6x)}{(\sin 4x)(\cos 5x)(\csc 2x)}$.

Ⓐ 0

Ⓑ undefined

Ⓒ $\frac{1}{3}$

Ⓓ $\frac{3}{2}$

● $\frac{1}{4}$

4. The line tangent to the curve $y = 2x^3 - 4x + 5$ at the point $(1, 3)$ will intersect the y-axis at the point

Ⓐ $(0, 0)$

Ⓑ $(0, -3)$

Ⓒ $(0, 3)$

● $(0, 1)$

Ⓔ $(0, -2)$

5. Let $f(x) = \begin{cases} cx^2 - 2x & \text{if } x < 3 \\ x^3 + cx & \text{if } x \geq 3. \end{cases}$

Find the value of the constant c so that f is continuous everywhere.

● $\frac{11}{2}$

Ⓑ $\frac{10}{3}$

Ⓒ $\frac{9}{4}$

Ⓓ $-\frac{8}{3}$

Ⓔ $-\frac{7}{2}$

6. A ball is being dropped from the top of a building so that its height above ground after t seconds is $(-16t^2 + 94)$ feet. Find the velocity of the ball at the moment when it is 13 feet above ground.

Ⓐ -64 ft/sec.

● -72 ft/sec.

Ⓒ -80 ft/sec.

Ⓓ -96 ft/sec.

Ⓔ -76 ft/sec.

7. If $f(x) = (\ln x)^{\ln x}$, then $f'(e) =$

Ⓐ $-e$

Ⓑ $\sqrt{e}$

Ⓒ e^2

● $\frac{1}{e}$

Ⓔ $\frac{2}{e}$

8. If $f(x) = \cos(2\pi x)$, find $f^{(61)}(\frac{1}{12})$, i.e., find the value of the 61^{st} derivative of f at $x = \frac{1}{12}$.

● $-2^{60}\pi^{61}$

Ⓑ $-2^{60}\pi^{60}$

Ⓒ $-2^{61}\pi^{61}$

Ⓓ $2^{61}\pi^{61}$

Ⓔ $2^{60}\pi^{61}$

9. Let $f(x) = xe^{x^2}$ and $g = f(f(x))$. Then $g'(1) =$

Ⓐ $(2e^2 + 1)e^{e^2}$

Ⓑ $2(2e^2 + 1)e^{e^2}$

Ⓒ $3(2e^2 + 1)e^{e^2}$

Ⓓ $2(2e^2 + 1)e^{1+e^2}$

● $3(2e^2 + 1)e^{1+e^2}$

10. Find the value of $\lim_{x \to 0} \dfrac{\cos^2 x - \cos^2(2x)}{x^2}$.

Ⓐ $\sqrt{2}$

Ⓑ $\dfrac{1}{\sqrt{2}}$

● 3

Ⓓ $\dfrac{1}{2}$

Ⓔ undefined

PART B *[50 marks]*

Please read carefully:
Present your complete solutions to the following questions in the spaces provided, in a neat and logical fashion, showing all your computations and justifications. Any answer in PART B without proper justification may receive little or no credit. Use the back of each page for rough work only. If you must continue your formal solution on the back of a page, you should indicate clearly, in LARGE letters, "SOLUTION CONTINUED ON THE BACK OF PAGE ____". In this case, you may get credit for what you write on the back of that page, but you may also be penalized for mistakes on the back of that page.
MARKS FOR EACH QUESTION ARE INDICATED BY [ ].
DO NOT TEAR OUT ANY PAGES.

1. Let $f(x) = x^2+3$. Find $f'(x)$ from first principles (i.e. by using only the definition of the derivative)

[7]

2. Use any suitable method to find $\frac{dy}{dx}$ for each of the following. There is no need to simplify your final answers for this question.

(a) $y = \dfrac{\arctan x}{2 + e^{3x}}$.

[4]

(b) $y = (x^2 + 8)^{10}(x - 5)^8$.

[4]

3. For this question, simplify your final answers as much as possible.

(a) Find $f'(\frac{\pi}{6})$ if $f(x) = \ln(\sin^2 x)$.

Ans. $2\sqrt{3}$

[4]

(b) Find $f'(4)$ if $f(x) = 2^{\sqrt{x}}$.

Ans. $\ln 2$

[4]

4. Find $\lim_{x\to\infty}(\sqrt{x^2-2x+1}-x)$.

[5]

Ans. -1

5. Find the horizontal asymptotes (if any) of each of the following functions. Remember to justify your answers.

(a) $f(x)=\dfrac{3|x|}{2x-8}$.

Ans. $y=\frac{3}{2}$ and $y=-\frac{3}{2}$

[4]

(b) $f(x)=2e^{-x}+1$.

Ans. $y=1$

[3]

6. Find the tangent line to the curve $x^2y + \sin(2y) = x - 2$ at the point $(2, 0)$.

[7]

Ans. $y = \frac{1}{6}(x-2)$

7. (Note: **This is not an easy question. Very little or no credit will be given unless your solution is completely correct.**)

A circle is centered at the point $(6, 0)$ and has radius 5. Find the slope of the line passing through the point $(-\frac{7}{3}, 0)$ and tangent to the upper half of the circle.

Ans. $\frac{3}{4}$

[8]
