

Announcements

28 January 2015

Assignment 1 is posted

It must be completed individually.

There is starter code provided, but it is incomplete, so it will not compile.

We'll cover a lot of topics needed for the assignment this week. Some of next week's material will also be needed.

After today's lecture, you can get started on the code specified by the Figure 3 UML diagram (everything except the `Moveable` interface and `move` methods).

Have Eclipse generate getters, setters, etc. for you!

NSERC USRAs

Undergraduate Summer Research Assistant Positions

Applications due Friday 30 January

See Piazza announcement for more info
