

Course notes for CSC 165 H:  
Mathematical Expression and Reasoning  
for Computer Science

Gary Baumgartner and Danny Heap and Richard Krueger and François Pitt

Winter 2012

# CONTENTS

1	INTRODUCTION	5
1.1	What's CSC 165 H about? . . . . .	5
1.2	Human versus technical communication . . . . .	7
1.3	Problem-solving . . . . .	8
1.4	Inspirational puzzles . . . . .	9
1.5	Some mathematical prerequisites . . . . .	10
2	QUANTIFICATION, IMPLICATION, AND SYMBOLS	15
2.1	Universal quantification . . . . .	15
2.2	Existential quantification . . . . .	16
2.3	Properties, sets, and quantification . . . . .	17
2.4	Sentences, statements, and predicates . . . . .	18
2.5	Implications . . . . .	19
2.6	More symbols . . . . .	20
2.7	Implication in everyday English . . . . .	21
3	LOGICAL CONNECTIVES	23
3.1	Universal quantification and implication again . . . . .	23
3.2	Vacuous truth . . . . .	24
3.3	Equivalence . . . . .	24
3.4	Restricting domains . . . . .	25
3.5	Conjunction (And) . . . . .	25
3.6	Disjunction (Or) . . . . .	25
3.7	Negation . . . . .	26
3.8	Symbolic grammar . . . . .	27
3.9	Truth tables . . . . .	27
3.10	Tautology, satisfiability, unsatisfiability . . . . .	28
3.11	Logical "arithmetic" . . . . .	28
3.12	DeMorgan's Laws . . . . .	29
3.13	Implication, bi-implication, with $\neg$ , $\vee$ , and $\wedge$ . . . . .	29
3.14	Transitivity of universally-quantified implication . . . . .	29
3.15	Summary of manipulation rules . . . . .	30
3.16	Multiple quantifiers . . . . .	30
3.17	Mixed quantifiers . . . . .	31
4	PROOFS	33
4.1	What is a proof? . . . . .	33
4.2	Direct proof of universally-quantified implication . . . . .	34
4.3	Hunting the elusive direct proof . . . . .	34

4.4	An odd example of direct proof . . . . .	35
4.5	Another example of direct proof . . . . .	36
4.6	Direct proof of universally-quantified predicate . . . . .	37
4.7	Indirect proof of universally-quantified implication . . . . .	37
4.8	Proof by contradiction . . . . .	37
4.9	Direct proof structure of the existential . . . . .	38
4.10	Multiple quantifiers, implications, and conjunctions . . . . .	38
4.11	Example of proving a statement about a sequence . . . . .	39
4.12	Example of disproving a statement about a sequence . . . . .	40
4.13	Non-boolean function example . . . . .	41
4.14	Substituting known results . . . . .	41
4.15	Proof by cases . . . . .	42
4.16	Proving $\vee$ using cases . . . . .	43
4.17	Building formulae and taking formulae apart . . . . .	44
4.18	Summary of inference rules . . . . .	46
5	ALGORITHM ANALYSIS AND ASYMPTOTIC NOTATION . . . . .	49
5.1	Correctness, running time of programs . . . . .	49
5.2	Binary (base 2) notation . . . . .	49
5.3	$\log_2$ . . . . .	50
5.4	Loop invariant for base 2 multiplication . . . . .	50
5.5	Running time of programs . . . . .	52
5.6	Linear search . . . . .	52
5.7	Run time and constant factors . . . . .	53
5.8	Asymptotic notation: Making Big-O precise . . . . .	54
5.9	Insertion sort example . . . . .	61
6	A TASTE OF COMPUTABILITY THEORY . . . . .	65
6.1	The problem . . . . .	65
6.2	An impossible proof . . . . .	65
6.3	Countability . . . . .	66
6.4	Diagonalization . . . . .	69
6.5	Reductions . . . . .	72
