- S5.19** The only doctor who doesn't like cats likes dogs.
- S5.20** Anybody who likes just one dog likes cats.
- S5.21** If only one person likes Bob, then Bob isn't married to anybody.
- S5.22** Exactly one dog likes exactly one cat.

Symbolize each of the following sentences using the abbreviation scheme provided

A¹: *a* is a sea.

D¹: *a* is a time

G²: *a* is quieter than *b*.

K²: *a* is deeper than *b*.

J³: *a* steps into *b* at *c*.

a: Ann

e: Earth

d¹: the planet closest to *a*.

B¹: *a* is a river.

E¹: *a* is a planet.

H²: *a* flows through *b*.

L²: *a* leads to *b*.

L³: *a* leads *b* to *c*.

b: Mars

f: the sun

C¹: *a* is a canyon.

F¹: *a* is a person.

O² *a* is on *b*.

c: The Cotahuasi Canyon

g: The Grand Canyon

NOTE: the Cotahuasi may not actually be the deepest canyon on earth (although it has been considered to be the deepest.) And many canyons are deeper than the Grand.

S5.23 Only Ann leads people to The Cotahuasi Canyon.

S5.24 Only the Cotahuasi Canyon is deeper than the Grand Canyon.

S5.25 Exactly one canyon is deeper than the Grand Canyon.

S5.26 There are no rivers on any planet other than Earth only if there are no seas on Mars.

S5.27 Different rivers lead to the same sea.

S5.28 Earth is the planet closest to Mars.

S5.29 Earth is not the planet closest to the sun.

S5.30 Earth is not the planet closest to the planet closest to Earth.

S5.31 The planet closest to the Earth is the planet closest to the planet closest to the sun.

S5.32 The Cotahuasi and at least one other canyon are deeper than the Grand Canyon.

S5.33 Exactly one sea has exactly one river leading to it.

S5.34 The Cotahuasi Canyon is the deepest canyon.

S5.35 The Cotahuasi Canyon is not deeper than the deepest sea.

S5.36 If there are canyons on Mars that are deeper than those on Earth, the Cotahuasi is not the deepest canyon.

S5.37 The deepest river makes the least noise.

S5.38 The river that flows through the Grand Canyon flows through other canyons.

S5.39 A person can only step into one river at a time.

S5.40 Nobody steps into the same river twice.

A^1 : a is a problem.	D^1 : a is difficult.	H^1 : a is a person.	I^2 : a is in b .
J^2 : a is a student of b .	K^2 : a is able to understand b .	M^2 : a can solve b .	
a : Amy.	b : Bob	c : the text.	d^1 : the teacher of a .
e^1 : the author of a .	d^2 : the son of a and b		

S5.41 All things are identical to something.

S5.42 If two things are both the same as another thing, then they are the same as each other.

S5.43 Everybody is identical to him/herself.

S5.44 Only Bob's teacher can understand the text.

S5.45 Bob is the only person who can understand Amy.

S5.46 There is exactly one difficult problem in the text.

S5.47 The difficult problem in the text cannot be solved by anybody.

S5.48 Amy can understand only Bob.

S5.49 There is exactly one problem that all of Amy's students can solve.

S5.50 The problem in the text that everybody can solve is not difficult.

S5.51 Bob's difficult student doesn't understand the text.

S5.52 If only one person can understand the text, then it is difficult.

S5.53 Amy has only one student.

S5.54 If only one person can solve every difficult problem in the text, that person is Bob.

S5.55 Only Amy and her teacher are able to understand the text.

S5.56 The person who can solve all the problems in the text is one of Amy's students.

S5.57 The person who can't solve any of the problems in the text cannot understand any of his teachers.

S5.58 Just one person is able to understand Bob and Amy's son.

S5.59 Amy is the son of Bob and Bob's teacher.

S5.60 Bob's teacher is the author of the text.

S5.61 Bob and Amy's son is not able to understand the text even though he a student of its author.
