

Assignment 5

$$1. \quad \theta_l = \frac{l}{d} \quad (\text{use m})$$

$$\theta_l = \frac{10^{-4} \text{ m}}{0.25 \text{ m}} = 4 \cdot 10^{-4} \text{ rad.}$$

$$= \underline{\underline{82.5''}}$$

$$\theta_{\text{Keck}} / \theta_{\text{eye}} = D_{\text{eye}} / D_{\text{Keck}} = 5 \cdot 10^{-3} \text{ m} / 10 \text{ m}$$

$$\theta_{\text{Keck}} = \underline{\underline{4.1 \cdot 10^{-2}''}}; \text{ can see } 10^{-4} \text{ m from } \underline{\underline{500 \text{ m}}}$$

$$2. \quad \frac{v^2}{r} = \frac{GM_{\text{BH}}}{r^2}$$

$$r = \frac{GM_{\text{BH}}}{v^2} \quad v = c$$

$$r = \frac{6.67 \cdot 10^{-11} \text{ N m}^2 \text{ kg}^{-2} \cdot 1.989 \cdot 10^{30} \text{ kg}}{(3 \cdot 10^8 \text{ m/s})^2}$$

$$= 1.47 \cdot 10^3 \text{ m} \rightarrow \underline{\underline{1.47 \text{ km}}}$$

Note that slightly more realistically $v_{\text{escape}} = c = \sqrt{\frac{2GM}{r_{\text{BH}}}}$
 $r_{\text{BH}} = \frac{2GM}{c^2}$

$$3. \quad p^2 = \frac{4\pi^2 a^3}{GM_{\text{J}} + M_{\text{cometary}}}$$

$$M_{\text{J}} = \frac{4\pi^2 \cdot (1.07 \cdot 10^9 \text{ m})^3}{6.67 \cdot 10^{-11} \text{ N m}^2 \text{ kg}^{-2} \cdot (6.134 \cdot 10^5 \text{ s})^2} = \underline{\underline{1.93 \cdot 10^{27} \text{ kg}}}$$

~ 0.1% of Sun's mass

$$4. \quad a) 1'' = 4.85 \cdot 10^{-6} \text{ radians} = \theta$$

$$\theta = \frac{l}{d}$$

$$l = \theta d = 4.85 \cdot 10^{-6} \cdot 20.89 = 1.01 \cdot 10^{-4} \text{ Mpc}$$

$$= \underline{\underline{0.101 \text{ kpc}}}$$

$$b). \quad 12 \text{ kpc} = 3.72 \cdot 10^{20} \text{ m}$$

$$\frac{v^2}{r} = \frac{GM_{\text{enc}}}{r^2} \rightarrow M_{\text{enc}} = \frac{v^2 r}{G}$$

$$= \frac{(3.05 \cdot 10^5 \text{ m/s})^2 \cdot 3.72 \cdot 10^{20} \text{ m}}{6.67 \cdot 10^{-11} \text{ N m}^2 \text{ kg}^{-2}}$$

$$= \underline{\underline{5.19 \cdot 10^{41} \text{ kg}}} = \underline{\underline{2.61 \cdot 10^{11} \text{ Mo}}}$$

c). $2.7 \cdot 10^{10} L_{\odot} \cdot 2.3 M_{\odot}/L_{\odot} = \underline{\underline{6.21 \cdot 10^{10} M_{\odot}}}$

d). Gas is negligible.

$$\begin{aligned} f_{\text{dm}} &= \frac{M_{\text{total}} - M_{\text{stars}}}{M_{\text{total}}} = 1 - \frac{M_{\text{stars}}}{M_{\text{total}}} \\ &= 1 - \frac{6.21 \cdot 10^{10} M_{\odot}}{261 \cdot 10^{10} M_{\odot}} \\ &= \underline{\underline{0.76}} \end{aligned}$$
